Click on the banner below to find out more about the new and revolutionary Automated Forex Cash System

This is a product of **[Automated Forex Cash](#)**

Your Advanced System X is here. We were planning to sell it at some point. But heck, let's just give it away for free. We'd like to give you more free content as our way of saying thank you for being a loyal reader of our newsletter.

Actually, Advanced System X is not a single trading method, but composed of TWO different powerful forex trading systems

Now, let's just dive right in:

Advanced System X1:

Timeframe: 1-hour.

If you already read our “10 pips (or more) a day” system, you can see that System X1 is built upon that system. We use Japanese candlestick pattern to confirm our signals.

In this system, we use the following components:

1. 5-period Exponential Moving Average (EMA 5) applied to the Close.
2. 12-period Exponential Moving Average (EMA 12) applied to the Close.
3. 21-period RSI (RSI 21)
4. Bullish/Bearish Engulfing Pattern, Hammer, Inverted Hammer candlestick patterns.

Entry Rules for Long Trades

:

Two conditions must be fulfilled:

1. EMA 5 crosses EMA 12 to the upside... AND our RSI 21 > 50.
2. We've got confirming candlestick pattern: Either Bullish Engulfing Pattern or Hammer.

:

Entry Rules for Short Trades

Two conditions must be fulfilled:

1. Enter short when EMA 5 crosses EMA 12 to the downside AND RSI 21 is less than 50.
2. We've got confirming candlestick pattern: Either Bearish Engulfing Pattern or Inverted Hammer.

.

Stop Loss:

For long trades, stop loss should be placed at the nearest support.

For short trades, stop loss should be placed at the nearest resistance.

Exit Rules for Long Trades

:

Exit the trade when EMA 5 crosses back below EMA 12 Or RSI 21 < 50.

Or when price stalls at major resistance, trendline, pivot points, Fibonacci projection target.

Or when bearish engulfing patterns or inverted hammer patterns form.

Exit Rules for Short Trades

Exit our short trade when EMA 5 crosses above EMA 12 Or RSI 21 > 50

Or when price stalls at major support, trendline, pivot points, Fibonacci projection target.

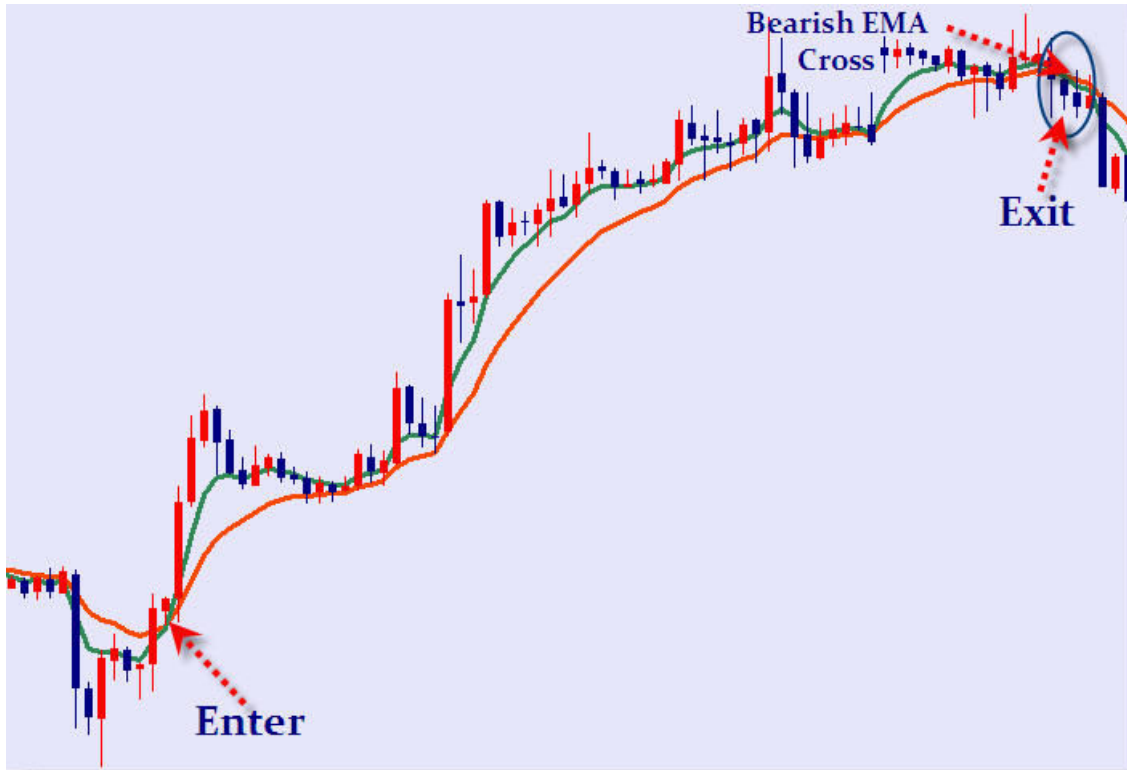

Or when bullish engulfing patterns or hammer patterns form.

Trade Example:

We enter a long trade because we've got a bullish EMA cross (EMA5 cross EMA12 to the upside), RSI > 50, and a hammer candlestick pattern.

This is a product of [Automated Forex Cash](#)

We exit the long trade when EMA5 crosses back below EMA12.

Advanced System X2:

Timeframe: Daily.

For some reasons, 365-period Simple Moving Average (SMA365) often acts as a price magnet & major support/resistance. Why? I don't know. I just know it works. And we can use it to make profits from the markets.

In this system, we use the following components:

1. 50-period Simple Moving Average (SMA50) applied to the Close.
2. 200-period Simple Moving Average (SMA200) applied to the Close.
3. 365-period Simple Moving Average (SMA365) applied to the Close

Entry Rules for Long Trades

:

Two conditions must be fulfilled:

1. SMA50 is above SMA200
2. We've got a bullish engulfing pattern or a hammer pattern form at/or near SMA65.

:

Entry Rules for Short Trades

Two conditions must be fulfilled:

1. SMA50 is below SMA200
2. We've got a bearish engulfing pattern or an inverted hammer pattern form at/or near SMA65.

Stop Loss:

For long trades, stop loss should be placed at the nearest support.

For short trades, stop loss should be placed at the nearest resistance.

Exit Rules for Long Trades

:

Exit when price stalls at major resistance, trendline, pivot points, Fibonacci projection target.

Or when bearish engulfing patterns or inverted hammer patterns form.

Exit Rules for Short Trades

Exit when price stalls at major support, trendline, pivot points, Fibonacci projection target.

Or when bullish engulfing patterns or hammer patterns form.

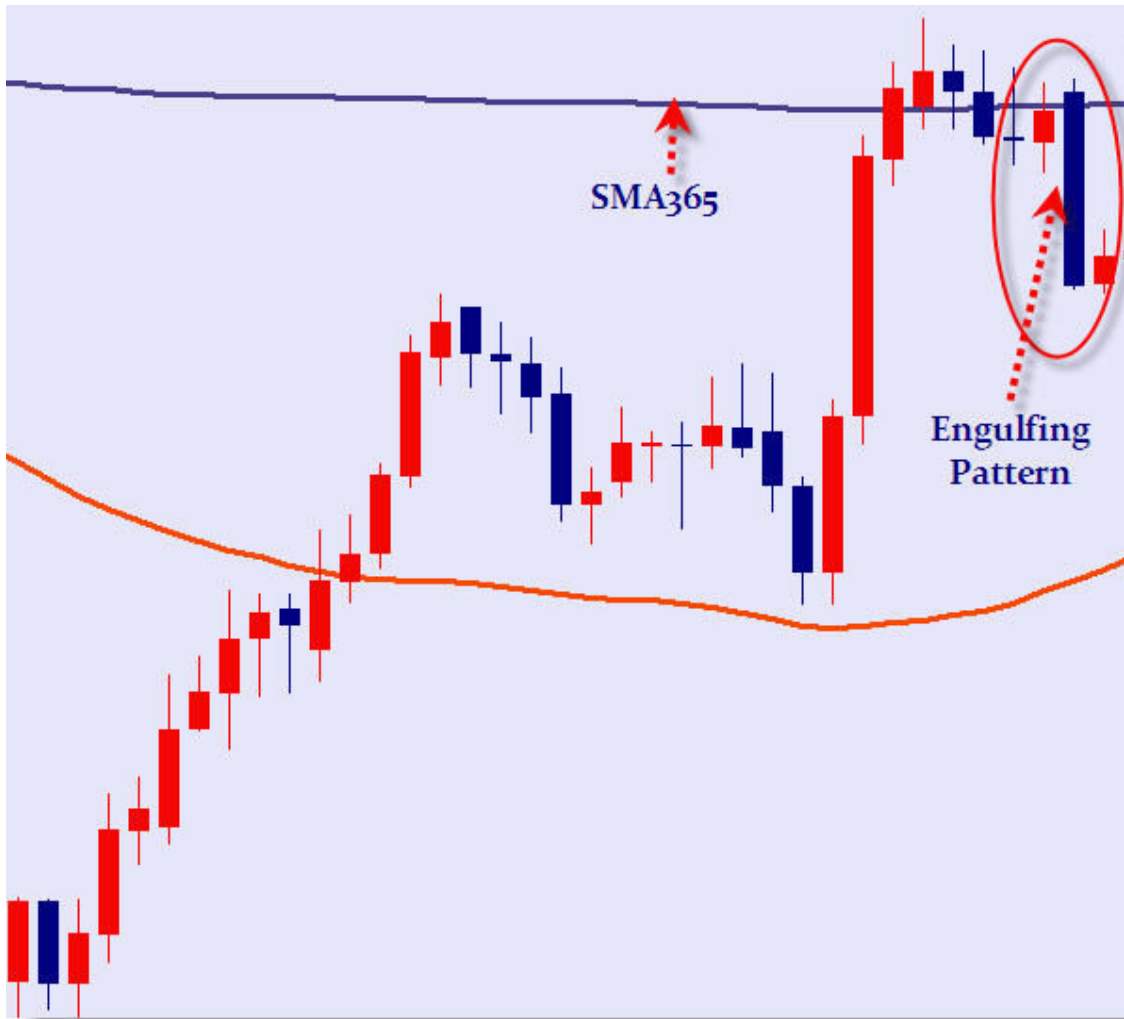

Go to the next page for Trade Example:

We have a nice downtrend. And SMA50 crosses below SMA200.

This is a product of [Automated Forex Cash](#)

Then price retraces, and touches SMA65 (the dark blue line). A bearish engulfing pattern then forms. We enter our short trade.

This is a product of [Automated Forex Cash](#)

We exit our short trade when a hammer pattern forms.
